Jordan T. Romero

Founding Senior Software Engineer · Full Stack + AI Product

Austin, TX · jordan.t.romero@gmail.com · linkedin.com/in/jordan-t-romero · github.com/jordan-romero · jordantromero.com

SUMMARY

Senior full-stack engineer with 5+ years building product at startups. I was the first engineering hire at Luster, an AI practice and coaching platform for sales teams, where I ship AI features end to end. I own work from design session to production flag: TypeScript/React UI, Node and Python services, LLM scoring and Terraform-managed AWS infrastructure. I also bridge engineering and go-to-market, owning release notes, help docs and monthly product training for CS and Sales, and I build the agentic tooling my team uses to plan, review and ship.

EXPERIENCE

Luster

Remote · Jan 2025 – Present

Founding Senior Software Engineer + GTM Engineer · first engineering hire · web, API, AI core and infrastructure · contributions: github.com/jordan-luster

- **Real-time AI voice practice.** Built the call and skill-drill experience: audio device checks and switching, speech-to-text resilience (reconnect and retry, WebSocket keepalive, keyword boosting), screen sharing during AI calls, session recording with multipart upload, and multi-language voices.
- **Integrations Center.** Built Luster's integrations platform and its package-and-feature entitlement system: Zoom, Gong and Salesforce connections through an embedded integrations platform, Google Calendar (webhook, polling and watch-lifecycle Lambdas), Outlook, and Close CRM dialer ingestion.
- **Weekly Insights pipeline.** Designed the Step Functions + EventBridge + Lambda workflow that writes AI individual, team and executive summaries with practice recommendations, logs every LLM call for evaluation, and sends personalized emails through SendGrid, with team alerts, subscriptions and deep links.
- **Practice design.** Built personalized practice challenges generated after every session, custom call types on a new conversation-type model (with data migrations), skills management with AI-assisted skill authoring, Certification mode and Dress Rehearsals.
- **Scoring and coaching.** Shipped live-call scoring and practice scoring model upgrades, skill-level evidence citations, manager comments, the "Focus this week" homepage, the interactive Diagnostics report and a skill heatmap.
- **Recent work.** Engineering owner for Adaptive Difficulty, Skill Drill management, and transcript upload for live calls (LLM speaker identification, plus ingestion hardening); led Fact Sheets for Skills, which checks every scored call for accuracy.
- Led security hardening ahead of the annual compliance audit and drove a no-PII-in-logs standard across every repo.
- Built the team's **AI-native engineering tooling**: an automated PR-review pipeline, epic planning and ticket-bootstrapping agents, and a shared knowledge base fed from meetings, chat and Jira.
- Own customer and GTM communication for product: monthly release notes, help-center articles, launch emails and the monthly Product Enablement training for CS and Sales; run R&D ceremony scheduling.

Resilia

Remote · Jul 2022 – Dec 2024

Senior Software Engineer

Resilia helps nonprofits and the funders who back them build capacity, set goals and measure impact.

- **Funder Platform.** Key engineer designing and building the funder-facing product, so donors and funders can support nonprofit projects, track progress and measure impact, including the Funder Goals page.
- **Goals and impact.** Rebuilt Impact Goals so nonprofits can set, track and hit measurable outcomes, and built the collaborative goal experience shared between nonprofits and funders, with analytics on dashboard actions.
- **Insight tools.** Shipped an Executive Dashboard with real-time reporting, a Needs Assessment for evaluating organizational needs, and an in-app survey tool for live user feedback that fed product decisions.

- **Platform and reliability.** Worked across every part of the platform in React, TypeScript, Node.js, GraphQL, Prisma, PostgreSQL and Auth0, on microservices in AWS EKS; added error handling and logging across services and contributed to performance, scalability and security work.
- **AI and DevEx guild lead.** Led both guilds, bringing LLM tooling (Anthropic, Freeplay) into the product and team workflows and improving how engineers build and ship.
- **Quality and mentoring.** Introduced Playwright end-to-end testing across browsers, mentored junior developers on code quality and testing, and partnered with product and design in planning and retros to speed up rollouts.

Knock Remote · Apr 2021 – Mar 2022

Software Engineer

Knock is a home-buying startup that lets people buy their next home before selling their current one.

- **Customer dashboard.** Built the consumer dashboard for web and mobile with React and React Native, with real-time data sync across devices, Zustand state management, data visualizations and user-specific metrics.
- **Guaranteed Offer launch.** Led development of the "Guaranteed Offer" product release and shipped every web update and launch asset in two weeks.
- **Marketing site.** Rebuilt the marketing website to brand standards with responsive design and SEO (metadata, content structure, URL patterns).
- **Growth and performance.** Ran A/B tests on key dashboard features to lift engagement and conversion, integrated REST APIs and third-party services, and cut load times by optimizing API calls.

PROJECTS

- **Hearth**: a Discord bot and Next.js web app that gives a D&D campaign a memory you can talk to, with a permission filter so each player only sees what their character knows. TypeScript, Turborepo, Supabase + pgvector, Prisma, Claude agents, live transcription.
- **Common Tongue** (commontongue.dev): my software studio for small teams: websites, AI features and product builds, plus launch docs and training. Client work includes ActingAccents.com, a launch site and IPA-based online dialect course for actors (Next.js, Supabase, Prisma).

SKILLS

Languages TypeScript, JavaScript, Python, SQL, HTML/CSS

Frontend React, Next.js, React Native, TanStack Query, Material UI, Storybook

Backend Node.js, Express, GraphQL, REST, Prisma, PostgreSQL, DynamoDB, Supabase

AI LLM scoring and extraction, agentic workflows, MCP servers, Claude and OpenAI APIs, speech-to-text and AI voice APIs

Infra & quality AWS (Lambda, Step Functions, S3, EKS), Terraform, Docker, GitHub Actions, Vercel, Datadog, Playwright, Jest, LaunchDarkly

EDUCATION

Southwestern University · Bachelor's Degree 2012
